**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a prodrug composition, classified in class 514, subclass 809.
- II. Claims 8-10, drawn to a method of enhancing oral bioavailability of therapeutic polypeptide, classified in class 514, subclass 2.
- III. Claims 11-13, drawn to a method of treatment of physiological condition through oral administration, classified in class 424, subclass 464.
- IV. Claims 14-16, drawn to method of controlled-release, classified in class 514, subclass 964.

Inventions I and III, and inventions I and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as defined can be used for materially different processes of using that product, such as methods of administration other than oral and for purposes other than controlled-release.

Inventions I and II, II and III, II and IV, and inventions III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different

effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions a composition and method of making oral availability; method of making oral availability and method of oral administration; and method of oral administration and method of controlled-release are not disclosed as capable of use together, and they have different modes of operation, functions, and effects.

These inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter. The search required for Group I is not required for Groups II, III, IV; the search for Group II is not required for Groups III and IV; and the search required for Group III is not required for Group IV. The claims are presented would impose serious burden on the examiner to conduct meaningful search and examination. Restriction for examination purposes as indicated is thus proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
